## Alphasense Product News Release

### Alphasense's Latest Oxygen Sensor, the O2-A3, a true 3-year life O2 Sensor

Alphasense, the Leading Independent Sensor Technology Company, has announced an addition to the A-Series Oxygen Sensor that uniquely provides a full 3-year warranty with no-leak guarantee.

Designated the O2-A3 and based on our existing O2 Series, it further enhances Alphasense's line up of the highest quality Oxygen Sensors with industry leading reliability and performance.

Costing less than 25% more than the existing O2-A2 (Alphasense's 2-year warranty sensor) but giving a minimum of 50% more lifetime.

This new Sensor is the result of enhanced technological capabilities within Alphasense, allied to feed-back from existing and potential users of Alphasense's Oxygen Sensors, many of whom have performed their own exhaustive tests to confirm performance, reliability and life expectancy of this new product.

The success of Alphasense's Oxygen and Toxic sensors is reflected in the increased volume of sensor sales because customers are demanding and getting the highest levels of reliability and support, with on-time deliveries.

Arthur Burnley, Sales and Marketing Director for Alphasense states: "Resultant from the continued improvements in all of Alphasense's products and acceptance by the user community, Alphasense has grown significantly over the last 18-months. A good example of this is the A-Series of Oxygen Sensors where we have realised in excess of 180% growth in the volume sold over the same period last year."

As a result of consultation with users, Alphasense has already developed a new miniature series of Oxygen sensors to complement its successful and unique D-Series of Toxic Sensors. To be designated the O2-G1 and O2-G2, these are respectively one and two year warranted products, that are pin compatible with the O2 A-Series but with much lower height. Further developments of the Oxygen Sensors from Alphasense are in the pipeline and will be announced shortly.

- END -
